

CONTRIBUTING FACTOR CAN CAUSE TO START SMOKING

INTRODUCTION:

Cigarette smoking, as it exists in the world today, is a most remarkable phenomenon. It is a habit of the most widespread proportions, and a product of the twentieth century. Smoking has been regarded as a disease with serious implications on the health of individuals, especially to non-smokers, a country's health system and economic well-being. It is one habit that ~~are~~ ^{is} commonly found ~~in everyday life, in an easy to find people smoking,~~ men, women, children, elderly, ^{the} and ^{the} rich/poor.

PHARAGRAPH 1:

One of the contributing factors that could cause children to start smoking ^{is} could begin ~~from within~~ the family itself because ^{they become} of the bad example or role model ^s and lack of parental involvement ⁱⁿ to their children ^{lives} from the start. As we know, children are easily influence ^d by adults and they are also full of curiosity at such young age ^{I cannot} and ^{it is} it can't be help since ^{it is} it's their nature ^{unguided} which help them to grow and learn thing ^s but it could lead to bad thing ^s if left ^{it is} unguided. Hence, adult smokers in a family set a bad role model for their children because ^{it is} it's a sign of psychological motivation or encouragement to their children and also ^{is} as a message that ^{it is} it's a grown up thing to do. In the end they tend to follow their parent ^s or family member ^s behavior ^s as a lifestyle. ^{An} Example of adult smokers can be their own parent ^s, sibling ^s or close relative ^s. Therefore, ^{it is} it's crucial for parent ^s to be more involve ^d and restricted ^{live in} their bad behavior ^s in front of their children. Besides ^{showing} giving bad role model, the lack ^{of} involvement from parent ^s should be emphasize because children who ^{are} engage ^d with people who smoke if left ^{unmonitored} unmonitored will turn out be ^s a smoker ^s. We all ^{are} aware that during that age, children have no knowledge of the effect ^s or consequences of smoking ^{because} because at that time ^{maybe} maybe they were influence by others due to peer pressure just to fit in with the crowd or maybe they like to try it as an act of rebellion. Therefore, parental involvement in monitoring their children ^{behavior} behavior ^{as to} as to guide and alert them about the harmful effect ^{of} of smoking ^{an adult to} could help children to overcome peer ^{pressure.} influence ^s to start smoking.

PHARAGRAPH 2:

Another factor that can contribute people to start smoking is the media. ~~Which we know~~
~~that the~~ media is a tool of the communication ^{that} can influence ^{people} persons, especially children and
youth. Today, ^{advertisements} can be seen there are many advertisements related to smoking in electronic media,
especially the Internet. Various types of ads ^{ads} that advertised by the tobacco companies to
popularize their products. This is normal where the human instinct has a desire to try ^{what they} when see
the advertisements. They start to join in the smoking habit. Although at first they just want to try,
but eventually they will be addicted ^{to} the enjoyment of smoking. ^{An} Example ^{bad} of advertisements is ^{when}
~~saying that~~ smoking can reduce body weight ^{for} in women ^{as} group. This is because the nicotine
contained in cigarettes can increase the rate of burning calories in the body. Following this belief,
~~thus some of the women~~ ^{who} group are concerned about their appearance ^s can be susceptible to
smoking. Other than that, ^{shows celebrities smoking} media is also considered as a role model can influence people to
smoking like artists and movies. As we know, ^{celebrities can influence their fans} that there are some people so fanatic to their
favorite artists. Anything done by the artist, ^{The fans can} sure they will do as well. Same as smoking, they will
follow ^{who smokes} when their favorite artist ^{movies} are smoking. ^{also} One more role model can influence people to smoke
smoking is movies. Today, many of movies ^{An} that showing smoking habits. ^{is the} Example the latest
Malay movies ^{many of the} in our country Malaysia is KL Gangster. In this movie, where the actors who hold
^{are shown} ~~gangster character~~ ^{are shown} must be smoking to show they are really gangster. This will affect especially
the youths that ~~their young instinct~~ influenced to do crime like gangster. In their minds if they
~~want to be a gangster, they must to smoking.~~

CONCLUSION:

There ^{is} a famous phrase ^{that is} often use ^s "Curiosity kill the cat". Children ^{who} come into the world eager to learn, they are motivated and curious and this is actually a good thing. It ^{is} their nature to experiment and learn new thing ^s which ~~is a desire to learn something new~~ but curiosity could also lead to bad thing. Therefore, it ^{is} important as parent ^s to support and guide them to channel their curiosity to something good because if they ^{are} were left un-observe ^d and supervise ^d children could ^{be} involve ^d with ⁱⁿ ~~something bad~~ such as smoking. Hence, as parent ^s and adult ^s we need to behave and show good example ^s to children so ^{that will} they grow up to be a good and successful adult ^s. This ^{ility} responsible ^s does not fall on to parent only but also to the society ^{at large}.
